ENGR. ZEESHAN AYAZ

PEC Registered Agricultural Engineer |

Sitara Diamond City Park, Satiyana Road, Faisalabad | 0303-8565657 | zeeshanbaig828@gmail.com

PROFESSIONAL SUMMARY

Results-driven, PEC-registered Agricultural Engineer specializing in site operations, irrigation and maintenance management, and resource coordination. Proven hands-on expertise in designing, troubleshooting, and maintaining pressurized irrigation networks (drip and sprinkler systems), executing hydrological site mapping, and upholding rigorous site compliance, reporting, and quality control standards. Eager to bring strong technical supervision, hardware-software integration, and operational oversight to agricultural site management projects.

KEY EXPERTISE

Site Operations & Coordination: Resource scheduling, field supervision, team communication, and workflow optimization.

Irrigation & Maintenance: Drip & sprinkler network management, hydraulic testing, pump selection, and routine upkeep.

Compliance & Quality Control: Data logging, technical reporting, safety compliance, and quality verification

Technical Software & Tools: AutoCAD, ArcGIS, Logplot9, and automated monitoring systems.

PROFESSIONAL EXPERIENCE

Engineering Intern / Technical Operations | Pakistan Council of Research in Water Resources (PCRWR) Islamabad

- Executed GIS-based spatial planning, hydrological field mapping, and topographical assessments to ensure strict data accuracy for large-scale water management projects.
- Analyzed lithological borehole logging using Logplot9 to support technical department decision-making and site infrastructure planning.
- Managed daily data collection, processing workflows, and technical reporting within the Water Management Department.

Event & Resource Coordinator | Society of Engineers and Technologists, UAF Sep 2024 – Jun 2025

- Coordinated large-scale technical operations, managing tight schedules, material resources, and cross-functional team communication.
- Liaised directly between faculty administration and project teams to guarantee smooth execution, safety adherence, and procedural compliance.

KEY ENGINEERING PROJECT

Demand-Based Automated Water Distribution System (Final Year Design Project) University of Agriculture, Faisalabad

- Supervised the complete field installation and testing of a smart, automated water distribution system utilizing microcontroller hardware to regulate real-time fluid delivery.
- Managed mechanical and electrical components, including automated actuators and motorized water valves, optimizing fluid distribution and minimizing wastage.
- Established robust feedback mechanisms and localized control loops to guarantee sensor-to-valve reliability and operational continuity.

AI-Powered UAV System for Weed Detection (Final Year Design Project) University of Agriculture, Faisalabad

- A drone with an RTSP-capable camera streams live video of crop fields to a ground station, where a YOLOv8 model detects crops and weeds for precision agriculture. This forms the computer-vision backbone of my final year engineering work.

Arduino Based Soil Moisture Sensor (Final Year Design Project) University of Agriculture, Faisalabad

- A compact meter built on an Arduino that reads soil moisture and turns the sensor signal into a value you can act on, so irrigation can follow what the soil holds instead of guesswork.

EDUCATION & CREDENTIALS

BSc Agricultural Engineering Graduation: 2026
University of Agriculture, Faisalabad (UAF) | Registered with Pakistan Engineering Council (PEC)

CGPA: 3.42/4.00

FSc. Pre-Engineering 2019 – 2021
Punjab Group of Colleges, Faisalabad

Marticulation (Science) 2018 – 2019
Anmol Public Boys School System, Faisalabad
1010/1100
